ER Work mobile cobot platform

The ER Work series from EasyRobotics, is a series of mobile cobot platforms developed to maximize mobility and flexibility in robotic automation.

One of the unique features of ER Work mobile platform is that one person easily can move the workstation, with a complete and fully installed collaborative robot, like pulling a suitcase.

The ER Work, all-in-one integrated solution, is part of the EasyRobotics' product range also consisting of ProFeeder, which as ER5 enables robot automation in small and medium sized companies.

ER-WORK

Is suitable for robot automation in production layouts with limited space or in productions demanding high mobility, flexibility and quick re-deployment due to small series production or the wish of moving the robot between different processing machines.

ER-WORK

Patent pending and registered design

Suitable for:

Maximizing mobile and flexible robotic automation in dense facilities. UR3 and UR5 collaborative robots from Universal Robots.

Optional features:

Easy+ software program for convenient set-up.
Interchangeable parts plate.

Integrated heavy duty rubber wheels

- For easy move of fully mounted cobot.

Integrated ventilated compartment for the controller unit. Offers space for adding an excess cable with the Tpad.

Plug and Produce

Due to the ER-Work built-in handle and heavy duty wheels, cobots can easily be moved and deployed by one person, pulling a fully mounted cobot on the ER-Work platform between the machines, when testing the current or a new layout and production flow.

Stainless table

- For demonstration and testing.
- Can be turned into 3 positions.
- Easily detectable during transport.
- Optional.

Multifunctional handle works

- T-pad holder, handle for transport and easy placement of extra rollers for storing in e.g. trunks of vehicles. Optional feature.

Integrated cord winder and foot pad

- Ensuring high safety in productions.
- No loose cords.
- Easy tilting and moving of ER-Work.

To achieve stability the ER-Work has four adjustable foot stands. The rubber wheel is lifted from the ground.

DOCKING for the ER-Work

- The optional ER-Work docking station, has a stainless docking plate with rounded corners.
- Including "sidewings" mounted below the ER-Work

Single-person handling

- ER-Work fits fully mounted with a UR cobot in the boot of a van and can be loaded in and out of the boot. Optional.

FACT

The compact mobile cobot workstation ER-WORK enables a flexible and mobile robotic automation in productions with limited space.

ER-WORK eliminates the use of pallet trucks and pallet forks for moving collaborative robots.
