News Digest

#1/October 2024

Headlines:

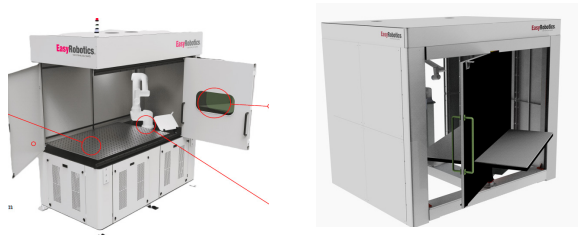

It has been a tumultuous year, with markets experiencing both ups and downs. At EasyRobotics, we have remained largely unaffected by the market fluctuations but remain aware of the volatile economic conditions.

Two new Welding cells

New Product Launches

Recently, we have been focusing on expanding our product line. We are excited to introduce the new WeldStation, featuring a sleek Siegmund welding plate of 1.5 meters, enclosed within a cabinet with green laser light protective windows.

This unique console has only three corners, making access to the cell incredibly easy. Additionally, we've launched our new Weldturn for larger tasks, compatible with both cobots and industrial robots. Both cells can be customized according to specific size requirements.

Custom Solutions by EasyOem for our Partners

EasyOem has been busy constructing customized robot cells and add-on systems for EasyRobotics' other products, such as shielding systems for the Profeeder X or XL versions and stands for industrial robots. It remains my belief that the best choice of products is to opt for tested and mass-produced robot cells. There's a reason we have a large installed base—it's an assurance to your end customers that they are not receiving prototype systems.

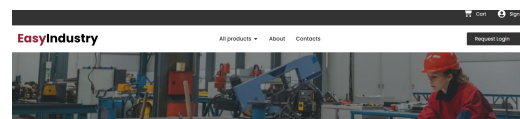

Global Expansion and Production

EasyRobotics has expanded our development department with a new mechanical center in Bangalore, India. From our 1,500 square meter production facility in Denmark and Poland, we serve customers globally. To date, we have produced more than 5,500 robot cells.

Website Launch and Partner Benefits

In our other Easy groups, easyindustry.com has just launched a new website that offers advantageous pricing for partners who register. The primary products are workshop tables for welding and other workshop handling tasks.

The Future

We are optimistic about the future at EasyRobotics. Our success is driven by our commitment to innovation, quality, and customer satisfaction. We believe in continually advancing our technology and expanding our offerings to meet the evolving needs of our clients.

Thank you for your unmatched support and continued positive feedback on our products. We are grateful for your partnership and look forward to achieving more together.
